

# DNA Model Instructions

Duplicate each page in a different color or color in the shapes using different colors. Outline the shapes with a black marker. Then, cut out the shapes and tape an Adenine to a Thymine and a Cytosine to a Guanine. Do this 10 times to make 10 “rungs” of the DNA ladder. Next, add a sugar group to the outside of the bases on both sides. Finally, connect the rungs of your ladder with the phosphate groups.
